

Allen & Heath DR66 4 switch & 4LED WallPlate:

The PL-2 interfaces with the DR/iDR-switch rear panel SWITCH INPUTS and LOGIC outputs ports. The number of PL-2 units which may be connected is determined by the number of remote switch and logic output lines from the DR/iDR system and how many you wire to each PL unit. The wall plate switch and indicator functions are programmed using the Allen & Heath WinDR (DR-switch) or iDR System Manager (iDR-switch) software. Space is provided on the control panel for custom labelling

Features:

- Description: Single wallplate module
- Inputs: 4x switch
- Outputs: 4x tri-colour LED
- For use with: DR / iDR-switch
- Connection: 2x 7way screw terminals
- Cable: Multicore, resistance <1k ohm
