

PRODUCT OVERVIEW

Xone: PX5 – Analogue Soul

Combining the signature warm analog Xone sound with class-leading digital connectivity, Xone: PX5 breathes life and soul into electronic music performance. The built-in FX technology offers new levels of manipulation with our new Xone: Xcite FX suite of performance-focused delays, reverbs, modulators, flangers, and distorters which are all assignable through simple hands-on control for fine-tuning the FX and expressing the DJ's inner creativity.

Xone: PX5 is a 4+1 channel mixer, equipped with the legendary Xone filter, 3 band EQ on all channels and an intuitive layout.

The versatile Send/Return feature allowing for the connection of external FX hardware with both Send/Return and Master Insert mode connections (Line or Hi-Z) equips Xone: PX5 for numerous enhanced setup scenarios. Each channel has its own dedicated send control for external FX processing and can also be routed to the internal Xone: FX engine.

XONE: FX

Xone: PX5 features the Xone: Xcite FX suite, a new breed of FX specifically tailored for DJ performance. The array of spectral delays, resonators, gritty reverbs and more is accessed through familiar, hands-on controls for instant, instinctive operation, making it easy to add energy and excitement to a track or create entire FX soundscapes. A hybrid FX mode combines the internal and external send & return FX for more advanced FX processing.

XONE FILTER SYSTEM

The original and best. The Xone filter is a legend in the DJ booth – none of its imitators come close. Xone: PX5's filter includes HPF, BPF, LPF, resonance control and frequency sweep, plus the option to route the Aux channel and External Return to the filter.

4+1 CHANNELS

On top of its four fully featured phono/USB/line channels, Xone: PX5 has a flexible mic/aux channel with XLR and 1/4" jack connectors and full 3 band EQ. If you don't perform with mics, the additional inputs allow this channel to be used as an extra stereo music source or USB Return channel.
