

# Epson DTG Sleeve Platen

## Large Format Printer Options

Epson DTG printers are designed to accept garments of various sizes and thicknesses. To ensure convenient loading and accurate printing we provide a range of platen sizes to suit different applications. The Platen should be matched to the job requirement.

Garment preparation, platen loading and unloading can add significant time to the overall production process. Each DTG printer ships with one (medium size) Platen - however depending on the work environment and production requirement - it can be advantageous to purchase additional platens.

The Sleeve Platen is designed for jobs on shirt sleeves and small merchandise with print areas up to 101 x 101mm.
