

PRODUCT OVERVIEW

Soundcraft Si Compact 32 and Expression 3 Flightcase offers full "in-the-air" protection for your SI Expression 3, SI Compact 32 and SI performer 3. Now, you need not to worry about the transportation of any among these devices. The rugged outer design of the flightcase along with inner soft material surface ensures the double safety of your device during air travel.

About NSP Cases

All NSP flight cases are manufactured to the highest standards of workmanship. Our design team have years of experience both on the road using flight cases daily as well as case manufacturing backgrounds.

Case Construction

Built to last, all our cases use 30mm aluminium extrusions and black scratch resistant panels. The thickness of the case panels is either 6.5mm or 9mm depending on the overall case size.

Flightcase Hardware

Where at all possible we use recessed hardware, zinc plated for corrosive resistance to the elements. Either Penn Elcom or our own brand of hardware is used to ensure high quality is maintained throughout.

Case Internals

Internal measurements are always quoted within any foam lining if advertised as being supplied. Keyboards, Combo, Music and Computer Cases are always foamed to suit your model perfectly, whereas DJ cases occasionally will be supplied within additional thin pads of self adhesive foam that allow marginal adjustment between popular models.

Soundcraft Si Expression 3 or Performer 3 Flightcase provides the safety of your equipment during air travel.

Features

- Heavy duty construction
- Fully foam lined
- Suits the EX 3
- Leave the mixer in the case
