

Professional quality drivers - clear sound in the studio and beyond Our K52 headphones deliver authoritative, extended low-frequency response that gives definition to kick drums and bass guitars. At the same time, the detail yet precisely balanced high-frequency response reveals the nuance in vocals, guitars and acoustic instruments. Our generous 40mm drivers deliver high sensitivity for powerful output, plus an extended frequency response that reveals every detail. The K52s also feature a low-impedance design for compatibility with a broad range of playback devices, from professional studio gear to portable music players.

Closed-back design - get lost in your sound The K52 headphones' closed-back design eliminates audio leakage and delivers sound to your ears only. You won't hear the drummer drop his sticks in the middle of tracking - and the mic won't pick up the sound of the click track in your headphones. This exceptional level of audio isolation is due to a new acoustic chamber, which sits between the ear cup and the hinge that connects to the headband. Our innovative design gives you the freedom to move your head in any direction, without letting sound in or out. With the K52, you'll enjoy a private workspace, no matter where you choose to create.

The style that fits all - comfortable listening Nailing the perfect take sometimes means tracking the same part for hours - and that's where comfort really counts. We designed our unique self-adjusting headband to automatically create the perfect fit for every band member. No need to mess with delicate sizing mechanisms, which have the potential to break over time. The exposed headband design keeps the K52 headphones comfortably light, without compromising driver size. Breathable, lightweight ear pads encircle your ears, rather than putting pressure on them. And a single-sided cable gives you freedom to move. To sum it up, these high-performance headphones sound, feel and look great.

#### Specifications

Headphone type - closed-back

Audio frequency bandwidth - 18 - 20000 Hz

Sensitivity headphones - 110 dB SPL/V

Rated Impedance - 32 Ohms

Earpads - Replaceable Leatherette

Detachable cable - no

Cable Length - 2.5 m

Cup style - Closed
