

PRODUCT OVERVIEW

The **AKG H 500 Shock Mount** provides effective isolation from physical vibration. Composed of a plastic shell and a flexible rubber interior, this ruggedly designed mount provides a reduction of structure-borne noise by 12 dB.

Furthermore, this mount allows for a quick and simple break down and set up of a sound system.

Reduces Noise

This shock mount provides effective isolation from physical vibration. Composed of a plastic shell and a flexible rubber interior, this ruggedly designed mount provides a reduction of structure-borne noise by 12 dB.

Easy Installation

This mount can easily install and uninstall - allowing for a quick and simple break down and set up of a sound system.

Compatible With:

E and ES Gooseneck Modules from the Discreet Acoustics Modular Series

Shock mount

The AKG H 500 shock mount is designed for permanent installation of E and ES version gooseneck modules from the Discreet Acoustics Modular (DAM) series. This mount provides attenuation of structure-borne noise by 12 dB. The H 500 shock mount consists of a durable plastic shell and flexible inner rubber boot. It allows for quick and easy set up and break down of a sound system. The H 500 requires a mounting hole of 2.0 inches (50 mm).
