

AKG 3165H00220 Overview

*The **MF M-Flush Mount Flange Module with Cover** from **AKG** is a flush mount module that efficiently reduces body noise from tables. Its slim design can integrate each powering module of the DAM+ Series and allows the microphones to be detached when not in use. A blind cap seals the connector outlet, leaving a flush interface on the table and simultaneously sealing the connector to protect it against dust.*
