

*AKG's **H 30 Universal Shock Mount Mic Stand Adapter** features a supportive cradle and uniquely-shaped elastic that suspends your microphone for superior recording.*

The Universal Mount will hold almost any mic with a diameter sized 15-33mm (0.59-1.3") and includes built-in mic cable clips. The Adapter screws directly to your microphone stand.

Keep Noise to a Minimum

Suspended mic mounts are less rigid than common hard mounts and can eliminate handling noise while keeping unwanted reflections to a minimum. Their streamlined shape approximates the ideal conditions of a mic freely floating in space, and their flexible suspension helps insulate the mic from vibrations transmitted up the mic stand via the floor.

Universal Application

The H 30 works with most small and average-sized mics. Its two elastic holders also stretch to accommodate either straight or conically-shaped microphones.

Cable Management

Built-in wire clips hold your microphone cable steady, keeping your mic stand neat and protected against loose cable rustling.
