LED Illuminated Pads

Drums for the Aspiring Musician

All drum and cymbal pads are mounted to the pre-assembled, height-adjustable, 4-post rack, making set-up a snap. In addition to 200 sounds (fully accessible by external MIDI sources), the DM Lite Module contains a built-in drum coach offering play-along patterns and exercises to improve your skills. Through stereo 1/4" outputs, the DM Lite Kit can be connected to an amplifier or sound system to share your performance. A 1/8" headphone output is available for private practice. Plus, there is an 1/8" aux input that allows you to jam out to your favorite tunes from an external audio source. The DM Lite Kit can even connect to your computer via USB for integration with software recording programs and virtual instruments

Designed for Quick Setup

The DM Lite Kit includes a pre-assembled 4-post rack, with all drum and cymbal pads in place. Simply unfold the arms, position the pads and cymbals, and use the quick-release fittings to set the height to match your size and playing style, no tools required. The wiring snake connects all of the pads, cymbals, and pedals to the DM Lite module with one single connection. Plug in the DM Lite module, grab the included drumsticks, and start playing

Sound and Performance

The DM Lite module is loaded with 200 drum and percussion sounds (fully accessible by external MIDI sources), making up 10 ready-to-play kits that are selected to compliment multiple genres of music. Inside the DM Lite module you'll also find extras such as the built-in coach feature, 30 play-along music tracks, and an onboard click-track (metronome) all add purpose to practice sessions and can help improve skills. The DM Lite module also provides an 1/8" stereo aux input, so you can listen, learn, and play along with lessons or jam to your favorite tracks stored in your computer, mobile device, or audio player. A headphone jack allows for private practice while 1/4" stereo outputs connect to a PA system, amplifier, or recording interface

Control On The Floor

Two foot pedals complete the DM Lite Kit. The first is a hi-hat open/closed momentary control pedal. Second is a velocity-sensitive piezo-controlled kick trigger pedal. Unlike simple on/off kick pedals, this dynamic pedal translates the player's force into volume, for a realistic kick-drum performance
