

Part of the versatile ES series of microphones from Audio-Technica, the ES925/21 is a 18.08" gooseneck ONLY. It's designed to work seamlessly with A-T ES925 microphone models (sold separately). It features an interchangeable mic element, offering a choice of mic polar patterns (MicroLine®, hypercardioid, cardioid, omnidirectional). The gooseneck—like all ES series components—is interchangeable with other ES modular microphone components as well, allowing you to mix and match power module types, gooseneck lengths, and microphone polar patterns.

*Please note: microphone element shown in image above is sold separately.*

## **Applications**

Professional sound reinforcement • Other commercial sound applications

## **ES925/21 Features**

- Length: 18.08"
- Seamless compatibility with ES925 microphone models (sold separately)
- Available in 6 lengths (additional length models sold separately)
- Available interchangeable mic elements (sold separately) permit angle of acceptance from 90° to 360°, and provide full-range, natural sound
- Small-diameter gooseneck design permits highly flexible positioning while maintaining a well-contoured appearance
