

Protect your EleMent Series Microphone with the **PF-100 Pop Screen** from Mackie. This pop filter is sized specifically for EleMent Series microphones, which is good, because it attaches directly to the capsule by means of included elastic bands. Once affixed to the mic, it helps reduce low-frequency pops and thumps, filtering them out of your voice for the best possible sound. This pop filter also helps keep your microphone clean.

Mackie PF-100 Specs
