| Technical Parameter for DM-CWUP-30B Pulverize Machine |                               |
|-------------------------------------------------------|-------------------------------|
| Model                                                 | DM-CWUP-30B Pulverize Machine |
| Capacity (kg/h)                                       | 50                            |
| Spindle speed (r/min)                                 | 3800                          |
| Feed particle size (mm)                               | ≤10                           |
| Crushing granularity (mesh)                           | 12-160                        |
| Crushing motor (kw)                                   | 5.5                           |
| Weight (kg)                                           | 290                           |
| Material                                              | stainless steel 304           |
| Overall dimensions (mm)                               | 910*750*1500                  |
| Voltage(V)&Frequency(Hz)                              | 380V;50hz; 3 phase            |
| Production                                            | About 20 working days         |
| Warranty                                              | 12 months                     |
