

Lukas PRO

Air dehumidifier

LUKAS Pro — with professional superpower

Swing mode: for equal distribution of dehumidified air

Night mode with operation at a low level and dimmed LEDs

Function control via smartphone app

Hose for permanent drainage

Fully-fledged air purifier with HEPA filter

As a 2-in-1 device, Lukas Pro simultaneously dehumidifies and purifies the air, creating a feel-good indoor climate. Thanks to Wi-Fi, he can be controlled effortlessly – at any time and from anywhere. The swing function, which can be activated separately, distributes the air optimally in the room. The laundry drying mode dries wet clothes in no time at all. With a dehumidification capacity of up to 50 L per day, Lukas Pro is ideal for large rooms up to 175 m². The HEPA filter reliably removes pollutants, pollen, dust and more – making him also a convincing air purifier. The dehumidification mode can be activated or deactivated as required. In night mode, Lukas Pro runs particularly quietly and unobtrusively. Functions such as a digital hygrostat, timer, automatic switch-off when the water tank is full and the choice of drainage option – via water tank or drainage hose – round off Lukas Pro.
