Peter

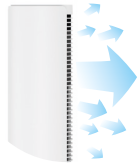
Fan

PETER – the swinging tower fan

Touch-sensitive control panel with 6 speed levels

Oscillating mode for even distribution of the airflow

Remote control and convenient carrying handle



Natural Breeze mode simulates natural wind conditions

The air inlet filter retains coarse particles from entering the appliance

The tower fan Peter produces a lot of wind – quietly and energy-efficiently – while his slimline stature gives him an elegant look. Thanks to his swing function, he distributes the air evenly throughout the room. The fan takes up little space due to his column shape, so that he can also be used in small spaces. Peter is individually adjustable, has a 1 to 7 hours timer and a natural breeze mode. The tower fan impresses with his useful functions, such as six different speed levels. Peter can be easily controlled via the touch panel with a light touch. He can also be operated using a convenient remote control. Thanks to his dimmable LEDs and quiet operation, tower fan Peter is ideal for the bedroom.
