

HURE SE425 CLEAR - DUAL HIGH-DEFINITION MICRODRIVER EARPHONES

Featuring Dual High Definition MicroDrivers, the clear **Shure SE425** earphones use a dedicated tweeter and woofer for accurate and balanced sound. They also feature a detachable cable, a premium carry case and a selection of sound Isolating foam, silicone and triple flange sleeves.

DUAL HIGH-DEFINITION MICRODRIVERS

The SE425 utilizes dual, balanced armature drivers for an incredibly accurate and balanced listening experience. It also includes an integrated passive crossover that ensures high and low frequencies remain distinct and defined. The SE425 sounds very natural and is the perfect choice for audiophiles - whether on-stage or on the go.

SOUND ISOLATING DESIGN

Sound Isolating Earphones were originally developed as Personal Monitor Systems to allow musicians to hear their own performances in loud onstage environments. They work by using soft, flexible sleeves to block up to 90 % of the background noise. You can concentrate on your music, whether you are on-stage, in a train, on the street or working out. At the same time you can reduce the audio level to conserve your hearing.

DETACHABLE CABLE WITH WIREFORM FIT

The SE535 features a durable Kevlar® reinforced cable that allows easy replacement or customisation. The formable wire ensures secure placement, and over the ear configuration keeps cables out of the way. The gold plated MMCX connector has a lock-snap mechanism allowing 360 degree rotation for comfortable fit.

AN ASSORTMENT OF SLEEVES FOR INDIVIDUAL FIT

Because every ear is different, the Fit Kit includes an assortment of foam and silicone sleeves in different sizes. Experiment with the size and style that creates the best fit for you. A good seal is key to optimizing sound isolation and bass response as well as maximizing comfort during extended wear.

SHURE SE425 CLEAR FEATURES
